

STEM and Outdoor Classroom Teacher/Facilitator K-8

With the adoption of new Science and Math curricula, and the recent campus additions of Makers' Space and outdoor classroom here at Faithful Shepherd Catholic School in Eagan, MN, we are seeking a teacher/facilitator to support the integration of the core disciplines designated as STEM. The classroom teachers in K-8, and the technology specialist, will continue to teach these core subjects, but this new position will assist with the lab and interactive events each week, as well as foster and coach the intended integration of subject areas in the context of the practice of scientific and engineering skills.

Ideal applicants for this position will have a background in STEM education, curriculum integration, outdoor education, and/or lab technology. The position is being created for next year, and there remains some flexibility in how the role takes shape – however, it clearly requires a capacity with hands-on, interactive and interdisciplinary approaches to learning. A teacher/facilitator experienced with coaching and supporting other teachers in the process of engaging students will be welcomed.

Please send cover letter and resume by June 24th to: Principal at cbutel@fscsmn.org. Interviews are underway.
