

AI-PROOF ASSESSMENT & RUBRICS

Assessments students can't hand to ChatGPT.

Detection tools don't work and banning AI doesn't scale. The fix is assessment design. RealPath rebuilds any lesson into an **authentic, process-verified assessment** — with the **scoring rubric written alongside it** — and pushes the finished pair straight into Canvas.

Process checkpoints, not just a final product

Timestamped observations, a teacher-signed interview, a verbal explanation to a partner. Evidence accumulates in class, where a chatbot can't follow.

The rubric is generated with the task

Four performance levels tied to your stated learning objectives, so scoring stays consistent across sections and holds up when a family asks how a grade was reached.

Anchored to your community, this week

Tasks built around local conditions and real audiences — a city council, a K-2 reader, a neighborhood problem. There's no generic answer to copy.

Students choose how they show it

Poster, PSA video, children's book, infographic — the product varies, the criteria don't. Choice raises engagement without loosening the standard.

EVERY ASSESSMENT SHIPS GRADE-READY

One four-level rubric, plain-language descriptors, applied the same way for every student — including the ones on an IEP or learning in a second language.
